ENDS:

David Plunkett. 18/01/15.

See Armfield Drawings Schedule: Blue/ Lettered drawing with instruction text as below.
To MAT - for Archiving - digital copy from /dp.

‘HOW TO USE ARMFIELD’S WASHER’.

Stoning and Washing Wheat for Milling:

Having started the pump working and filled up the tank with water, open the wheat slide and the wheat being discharged into the stoner by shoot **B**. sufficient water must be hosed to float the wheat over the rim **C**. The stones by their extra gravity will fall through. The water out the globular chamber **E**, Shortly after starting, the throttle valve **F** must be opened and again closed, and then the weight **G**, lifted to see how stoner is working, and the no wheat is passing into the chamber **E**, the wheat if any will fall to **H**, with the stones, to prevent this more water must be turned on or less wheat fed in if the wheat is not stoned properly turn on the water supply a little. To rinse off all dirt as the wheat comes of the worm, turn on the little spray at **J**, and if the wheat whizzer is up a little at **K**, in entering whizzer, turn on a little water at **L**, which will wash it in - - with spray from **M**. The water passes to the whizzer and all superfluous water and dirt will be thrown off and the wheat coming out, readily for milling at the spout tip; when the perforations of the whizzer casing becomes clogged it is readily cleaned while running by sprinkling with a little water, say a can full poured down round the top.

Barley Washing.

Barley is shot down through shoot **N**, and carried up through the worm using water being turned on at **J**, and the trash overflowing at hatch **P**, and m ---- of ---- tank and released by valve **K**, but barley not requiring to be stoned, can be washed with less water than what is required for stoning wheat.

Cleaning Down.

After the machine has been used it must be thoroughly washed down and cleansed by putting a length of rubber pipe on at **Q**. Then shut - - - ion guards **R**, having been removed , and worm lifted up by crank and chain **S**. Unplug **T**, taken out the whole can then be washed down clean in a few minutes by the above length of rubber that conveys the water to all parts.

Simplicity – if only I can complete it and make sense of it?

David. 12-12-13.
